

Dear followers of AIDASCO,

Knowledge is not static; it is a living force that grows and changes only when it is set in motion. Only then does it move from theory to practice, from classrooms to communities, from the pages of books to concrete actions. It is the students who give this knowledge movement and shape it into a powerful tool for change.

Student Record Book  
Index in the Republic of Serbia

Every project initiated by a student carries with it the energy of curiosity, courage, and perseverance. Whether it's research that advances science, an innovation that solves a social problem, or an initiative that changes the local environment. Students are often the first to dare to try, fail, and try again.

In this process, mentors have their role; they are support, inspiration, and guides. Without support, many ideas would remain only in the mind. With support, they grow into solutions that change lives. Sometimes mentors also have the opportunity to learn from their students. Then it is vital to recognize that moment, because it is precisely this exchange of knowledge that creates actual progress.

When students initiate knowledge, it ceases to belong to them alone. It becomes a movement that inspires, unites, and changes the world, one step at a time, one idea at a time.

Regards from the AIDASCO team
